# (ii) Non-Display fees:

## 3 Non-Display Information Usage

#### 3.1 Explanation of the non-display categories

The non-display license fees for the individual categories of each Non-Display Information usage are to be paid additively depending on the respective usage.

Boerse Stuttgart has defined the following categories for Non-Display Information usage:

## 1. Operation of a trading platform

The operation of a trading platform, which also includes the provision of buy and sell prices and, where applicable, the provision of liquidity for a trading platform, constitutes a separate customer category ("operation of a trading platform").

The operation of a trading platform includes the operation of an exchange, the operation of multilateral trading facilities ("MTFs"), organized trading facilities ("OTF") or comparable alternative trading systems, the execution of systematic internalization ("SI"), as well as the provision of so-called broker crossing systems, multi-dealer platforms and dark pools. The operation of trading platforms under third country regulations (e.g. based on the US Regulation NMS or Regulation ATS) is also subject to this regulation.

For this category 1 "operation of a trading platform", the only distinction is made with regard to the asset class used. A distinction is made between the use of the asset class bonds and all other asset classes excluding bonds regarding the license price. Specifically, the different license prices for this category can be taken from the table in section 3.2.1

The license fees for category 1 "operation of a trading platform" include the fees for license 2 "trading activity".

#### 2. Trading activity

The customer category trading activity comprises all activities of proprietary and third-party trading with the exception of the activities under 1 "Operation of a trading platform".

Proprietary trading activities comprise trading in one's own name and for one's own account. The customer category third-party trading comprises the performance of third-party trading activities, i.e. trading in another's name for another's account or trading in one's own name for another's account.

#### 3. Index calculation

The category index calculation includes the use of real-time information for the purpose of calculating one or more indexes that are redistributed either internally or externally. The calculation of key figures such as the NAV or iNAV does not fall under the category index calculation.

## 4. Non-Display Information usage in other applications

The Non-Display Information usage category in other applications includes use for purposes other than trading activities and / or index calculation, e.g. Risk management, profit-loss calculations, portfolio valuation, quantitative analyzes, fund administration, portfolio management.

# 3.2 Prices of the Non-Display Categories

# 3.2.1 Category 1: Operation of a trading platform<sup>2</sup>

# (iii) Discount policies:

\_

# (iv) Fees associated with license conditions:

## 1 (Re)Vendor Fees

The (Re)Vendor Fee is a fixed remuneration for Vendors and Revendors which is charged by the contractual partner of Boerse Stuttgart for the right to redistribute information in accordance with the detailed provisions of the Market Data Dissemination Agreement for Vendors / Revendors.

The (Re)Vendoren Fee real-time is charged in case a customer obtains the information of the Boerse directly via the data feed of the Boerse and is thus directly connected to the data distribution platform (SID) of the Boerse and does not use the data exclusively internally. In the case of an indirect purchase of the information in real-time, the (Re)Vendoen Fee real-time will not be charged.

The (Re)Vendor Fee does not apply to Vendors / (Re)Vendors who have exclusively ordered a non-display license for the use of information. The (Re)Vendor Fee real-time includes the Distribution Fee delayed. In case of exclusive redistribution of information to a service provider of the Vendor, no (Re)Vendor Fee real-time is due.

## 1.1 Delayed Data (Re)Vendor Fees
